I am passionate about OOP with PHP and take the time to develop decoupled applications that are fast, secure and easy to scale. My goal is to continue growing my skills as a web applications developer and contributing to the open source technologies I use such as Symfony. I am a very quick learner and enjoy finding solutions to new challenging problems.

SKILLS

Languages: PHP, JavaScript, MySQL, HTML5, CSS3, SASS, LESS, Typescript, XML, YAML.
Familiar with C#, Go, C++, and Java.

Tools: Git, Composer, Grunt, Bower, Node, Vagrant, Puppet, Varnish, Drush, RVM, Unity.

Libraries/Frameworks: Drupal, WordPress, Joomla, Silex, Symfony, Twig, Doctrine, Foundation.

Environments: Virtual Box, CentOS, Fedora, Ubuntu, Windows.

EMPLOYMENT

FULL STACK DEVELOPER / SYSTEM ADMINISTRATOR

Dorey Design Group: October 2013 to April 2015

I wore many hats at Dorey Design Group. I managed our internal servers that host Stash and Confluence with puppet. I also took over management of our staging server. Every week I held a training and teach the other developers best practices and new skills.

I was also responsible for estimating, building, and updating responsive websites based on proposals, RFCs and Photoshop files. I worked on Drupal, Joomla and wordpress sites along with fixing old custom sites. For web applications I used Silex.

OWNER

Yamiko LLC: June 2012 to Present

Yamiko is my business I use for contract work and game development. I build responsive websites and applications with foundation and Silex. After completion I host the projects on my own servers managed with puppet.

WEB DEVELOPER

RBL Interactive: June 2013 to September 2013

At RBL I created responsive html templates from Photoshop and illustrator files. The templates would be put into CMS Made Simple. To reduce repetitive work I created an application in Silex that would create a build of static pages and resources from the twig templates.

PROJECTS

WEEKLY TRAININGS

Dorey Design Group

I do weekly trainings to unify best practices, keep everyone's skills up to date and ready for upcoming changes. I trained the other developers in git, Vagrant, OOP in PHP, intermediate MySQL, Silex, Symfony, Grunt and more. I stay up to date with the communities and technologies by being on their internal mailing list and watching their git repos.

TWO SISTERS MEMBERSHIP REPORTING

Dorey Design Group

The two sisters have two different websites that offer memberships and teaching supplies. One is built with CakePHP and the other was a custom PHP site. I created a reporting tool in Silex to show them membership conversion rates, income and member data. Because they had a lot of data and the data was denormalized I had to use temporary tables and caching so the reports can be generated in a timely fashion. I also worked on a proposal to clean up and normalize their database and fix any resulting bugs in their existing sites.

ELEMENT RESIDENTIAL – [HTTP:// ELEMENT-RESIDENTIAL.COM](http://element-residential.com)

Dorey Design Group

I was given a spec sheet and Photoshop files to create Element Residential. I started with the Panopoly distribution of Drupal 7 and installed other useful modules like the adminimal admin menu to improve the admin user interface. The theme was built with an Omega subtheme based on the Photoshop comps. Because they needed a node to generate a series of pages with their choice of colors and images I hijacked a template, looked at the request uri and returned a rendered twig template populated with data from Drupal.

MARK WESTCOTT – [HTTP://MARKWESTCOTTPIANIST.COM](http://markwestcotpianist.com)

Yamiko LLC

Mark Westcott was a world renowned pianist who now teaches in the Portland area after being diagnosed with focal dystonia. The site goes through a remake every two years. The current version used a custom MVC framework I built shortly after finishing college. In addition to his website I published his book titled "Playing with Love" on lulu, upload his recordings to YouTube and make CDs for him to sell at his master classes.

NICOLIS – [HTTP://SPORTSATNICOLIS.COM](http://sportsatnicolis.com)

RBL

I created a responsive website based off of comps made in Photoshop. I Used JQuery to create the menus and handle some of the responsive design. The html was then converted to Smaty templates for CMS Made Simple. I also created templates for the navigational menus and events.

PRESENTATIONS

Introduction to MVC

Clark Community College – June 2013

A Tour of Silex and Symfony Components

Pacific Northwest Drupal Summit – October-2014

VOLUNTEER

NCONNECT

March 2015 to present

I am a volunteer to present in Portland schools about web development as a career and discuss the education requirements, expected pay and other relevant information. I am also talking with them about redoing their website.

THE MOCKINGBIRD SOCIETY

Youth Chapter Leader: June 2008 to December 2008

I was the first chapter leader for the mockingbird society and lead the southern Washington area. I would write articles, attend summit and lobby for foster children rights. Being the first chapter leader I laid the groundwork for the other chapter leaders to follow.

EDUCATION

Associates of Applied Technology in Web Design and Development, 2012

Clark Community College, Vancouver, WA

HOBBIES

Game development, Anime, Video games, Ballroom dancing, Piano
